AIR PODS

5d ago

Air Pods are one of the best Bluetooth earphones on the market. The lack of that annoying wires earphone is hist one of the great points of Apple's Bluetooth earphone! Between the sound quality, ease of use, convenience, and functionality the Air pods are a no brainer n terms of selecting the perfect Bluetooth earphone for you.

Easiest pairing of any headphones
> Just open the Air Pods next to your phone and a screen will pop up immediately to connect.
> You can pair the Air pods with any device (not just Apple) but the pairing will have to be done in the devices Bluetooth settings.
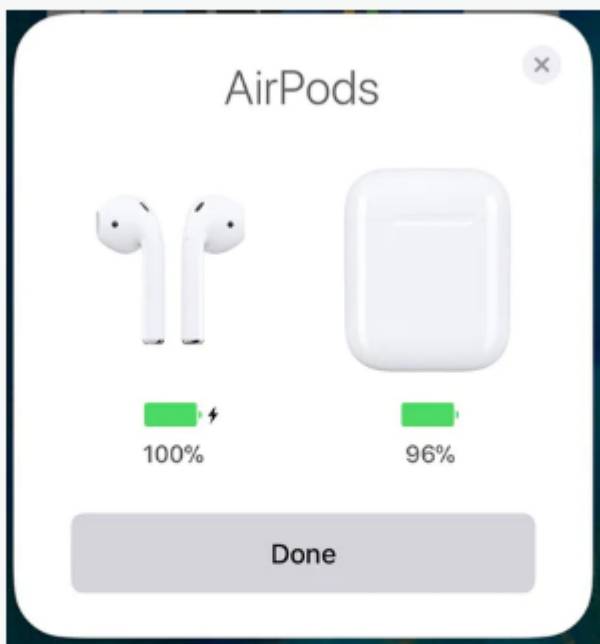

You can listen with only one Air Pod
> Leave one Air Pod in the case and one in your ear to have audio just playing from that air pod.
> When you have only one Air pod in the audio will switch from stereo to mono automatically.

Checking Battery Life In Various Ways
> Through the widgets page on the iPhone or iPad.
> While the Air Pods are in the case you can open the Air Pods case lid next to your iPhone and a screen will pop up automatically to show battery life.
> On the Apple watch you can swipe down on the screen and press the battery percentage to show the watch and Air Pods battery.

Customizing Function

> The Air Pods have tap function on the side of the Air pod.

> Such as double tap to skip a song, triple to go back to the previous song, double tap for siri, etc...

> You can customize these controls in the bluetoot setting.
